

## Hi-Fi Rack

Made in Gotland (Sweden)

A super stylish and practical hi-fi piece of solid oak, which is naturally oiled.

Each shelf has its own damper, to isolate vibrations.

The unit is modular, i.e. you can build on with several shelf levels and there are two base heights (modules). The unit is delivered with four shelves as shown.

The oak is oiled once with light oil. If a darker texture is desired, you can oil it yourself with darker oil.

The basic idea is to choose materials that are natural, like oak in this case, and not use anything other than a simple oil. The dampers are made of natural rubber.

Supplied with four shelves. You can decide for yourself where the two different shelf heights are placed. Everything comes in a flat package. It is very easy to assemble.

Our image shows how the higher module is positioned at the bottom.

The bottom foot block (round bar) has a damping foot, which can be adjusted in height by screwing and in this way the entire shelf can be adjusted horizontally. A little extra good because even vinyl players stand horizontally on the top shelf.

- The module dimensions for the plan are as follows:  
Height for module 130 is 130 mm and for module 230 is 230 mm (the height measurement for the respective shelves). This will also be the maximum height for an appliance for each shelf.
- The length to place an appliance is 463 mm
- The width or depth to place an appliance is 315 mm
- Each shelf has the outer dimensions L 550 mm, D 400 mm, H 30 mm (see below link for layout)
- The total height of the entire piece of furniture is 700 mm
- Total weight is 15 kg (gross package weight 23 kg)
- Maximum total load is approx. 150 kg distributed on four levels
